School Psychologist | AI Evaluation & Child Safety

School psychologist with 11 years at San Francisco Unified School District (SFUSD). I automate workflows my department ran by hand for years and build and evaluate local AI decision support tools grounded in domain expertise.

SELECTED AI WORK

Consult Panel | Builder 04/2026 - present

A local-first decision support tool for psychologists. Methodology: github.com/j88f8r/criterium-methodology

- Built a working prototype with AI coding agents. It runs on the psychologist's laptop, so student records stay on the device. Recorded a demo video.
- Designed the eval to mirror how psychologists build a reference: two of them write rubrics independently, a third adjudicates, a fourth does QA.

EXPERIENCE

San Francisco Unified School District 08/2014 - present

Hundreds of psychoeducational assessments and crisis interventions, 100 suicide and threat risk assessments, and 50 CPS reports. Worked through high-stakes cases with multilingual families in Mandarin and Portuguese.

> ***School Psychologist, Educationally Related Mental Health Services (ERMHS)*** 08/2025 - present
>
> - Consult with school teams on complex mental health cases and advise psychologists through the district consultation panel.
> - Take on 20 to 40 of the district's most complicated cases.
> - Modeled the eligibility, availability, and equity rules for a 108-person consultation panel and solved a full-year rotation that meets all of them. Replaced years of hand-sent reminders with automated ones sent 24 hours before each of 69 sessions, built from the latest schedule, with what panelists and presenters need to prep for that session's cases.
> - Co-developed and delivered district ERMHS trainings, each for 100+ psychologists, administrators, therapists, and teachers.
> - Replaced the shared ERMHS inbox's forward-everything filter with Gmail filters and a Google Apps Script router that runs every 5 minutes, labeling each email and sending it to one destination. Routes 20 to 40 emails a week for a team of 7.
>
> **Workflow automation (Python, built with AI coding agents)**
>
> - Built a reconciliation tool that compares weekly .xlsx provider assignments with our Google Sheets rosters (4,900 rows, 460 matched students), surfacing new assignments and transfers in one click.
> - Built an unattended pipeline (macOS LaunchAgents) that decrypts .docx referral cover sheets, converts them to .pdf, strips hidden metadata, and renames them. Runs 10 referrals a week, dry-run tested, with fail checks.
> - Built a referral packet tool: after I pull the documents by hand from SaaS systems (no secure API), it merges them into one password-protected .pdf packet and drafts the email via the Gmail API, sent with one click after human approval. Runs 5 to 10 a week.

> ***School Psychologist and Project Lead*** 08/2014 - 06/2025
>
> - Designed and led Bike It Forward, a counseling-while-biking pilot funded by a $10K grant I co-wrote. Six students showed 30 to 50% gains in emotional adaptability and regulation on CEFI pre/post scores (no control group, for ethical reasons).
> - Coordinated the SF Bicycle Coalition, a contracted cycling instructor, and district special education staff to plan, launch, and run the pilot at a school site.

CREDENTIALS AND EDUCATION

- California PPS Credential, School Psychology
- California LEP license in progress: supervised hours complete, exam window opens December 2026
- M.A. and B.A., School Psychology, SUNY Plattsburgh, 08/2006 - 05/2014. Highest Honor, GPA 3.91. Thesis: Effective Tech Implementation Models in Education.

Skills: eval design, rubric writing and adjudication, LLM-as-judge setup, local LLMs, AI coding agents, Python and JavaScript (Google Apps Script), FERPA and student privacy, psychoeducational assessment, suicide and threat risk assessment, crisis intervention, mandated reporting, training design

Languages: English, Mandarin, Portuguese
